Lucas Saldyt

Mesa, Arizona 505-506-1245 lucassaldyt@gmail.com http://github.com/LSaldyt

Education

- **Barrett, The Honors College. Arizona State University** Tempe, Arizona
  Bachelors of Computer Science, GPA: (3.7) *Sep. 2017 - Current*
  - Relevant courses: Data Structures and Algorithms, Theoretical Computer Science, Software Engineering, Complex Adaptive Systems, Mathematical Structures (Proofs), Linear Algebra, Statistics for Engineers, Differential Equations, Calculus 1-3, Human Systems Engineering
- **MIT Open Courseware** Online
  Supplementary Courses: work at github.com/LSaldyt *Ongoing*
  - Relevant courses: Data Structures and Algorithms, Quantum Algorithmic Complexity, Quantum Mechanics, Artificial Intelligence (Winston), Artificial General Intelligence (Fridman), Society of Mind, Computer Security, Information Theory

Work Experience

- **Sandia National Laboratories** Albuquerque, New Mexico
  Quantum Computation Intern *June 2015 - September 2018 (3 Summers)*
  - Developed high-fidelity quantum benchmarking software for Gate Set Tomography
  - Created a distributed high-performance simulation, verification, and data analysis software
  - Ported entire codebase (over 1 million lines) to Python3.x
- **The Fluid Analogies Research Group**
  Cognitive Science Intern *October 2016 - September 2018 (2 years)*
  - Revitalization of Douglas Hofstadter's "copycat" cognitive model
  - Statistical analysis and comparison of models to human data
- **Dr. Carlos Castillo-Chavez's Complex Systems Research Group** Tempe, Arizona
  Mathematics Intern *October 2018 - Current*
  - Math and Computer modeling of ant nest choice and alarm propogration
- **Unitary Fund**
  Quantum Software Researcher *Jun. 2018 - Current*
  - Prototyping of a quantum programming language, called "curry"
  - Presentation in Brussels, Belgium at the FOSDEM Quantum Computing Conference
- **Los Alamos National Laboratories** Albuquerque, New Mexico
  Quantum Computation Intern (Shadow) *April 2017*
  - Benchmarking the knapsack problem on LANL's DWave and IBM's 5-qubit machine

Skills

Fluent Programming Languages: Python, C++, Clojure, Java, Haskell

Operating Systems: Linux (Arch, Redhat, Ubuntu), MacOS X, Windows

Applications: Vim, LaTeX, Jupyter Notebook, MatLab, Autodesk design, OpenOffice, MS Office, Google Office

Libraries: tensorflow, pandas, seaborn, numpy, scikit learn

Natural Languages: English, Ukranian, Spanish

Projects

- **Vorpal** https://github.com/LSaldyt/vorpal
  Independent *December 2017*
  - A research and collaboration website, written in Clojure
- **Nova** https://github.com/LSaldyt/nova
  Independent *October 2017*
  - An Alexa-like assistant on Linux
- **Cryptometric** https://github.com/LSaldyt/cryptometric
  Independent *October 2017*
  - A server app that sends cryptocurrency statistics to a mobile phone by text

Awards

ASU New American University Scholarship ($14,000 annually)	2017
ASU Discovery Fellowship ($5,000)	2019
Fluid Analogies Research Grant ($5,000)	2017
FURI Research Grant ($3,000)	2017
Unitary Fund Research Grant ($2,200)	2018

Interests

Academic: Quantum Computing, Cognitive Science, Artificial Intelligence, Computer Science, Mathematics, Software Engineering

Sports: Okinawan Karate

Musical: Playing classical guitar and piano, composing music

Other: Writing novels (I have completed two, as well as some short stories and poetry)
